Features list for e-commerce website

1. Address Book
2. On line order tracking
3. Various payment Options – credit card, google checkout, paypal
4. Customized product browsing to match the product profile
5. Product Search (generic) and customized search
6. Wishlist
7. Intelligent shipping function – to optimize shipping costs
8. Multiple Shipping addresses on one cart (to send gifts to many people in one order)
9. Content Management on all pages, including home page.
10. Paypal payment verification to confirm the purchase, and then deducting the stock by the purchased quantity. This is a very special feature – even eBay do not have it, All eCommerce websites deduct stock as soon as buyer does a checkout – even if he did not pay on the payment gateway.
11. Pricing calculation based volume discount and promotional offers.
12. Pricing calculation for jewelry based on current Gold / Silver / Platinum rates

Project Background

Business Goal

1. To facilitate the product browsing based on the product profile and the category hierarchy.
2. To present products to the online buyer's in an attractive manner and allow freedom to zoom in for details where needed such as antiques ecommerce website.
3. To calculate pricing of the selected quantity based on various discount schemes and promotional offers
4. To calculate real time price for jewelry based on Gold rates.
5. To pre-fill shipping and billing information for registered users, also to maintain multiple address book for registered users.
6. To facilitate a wide range of payment methods available – so the buying becomes easier.
7. To ensure security of user's sensitive information such as user id, password, credit card information.
8. To ensure safe payments
9. To build a website which is 100% CMS based and the owner of the site can update the content swiftly.
10. To add personal touch to the gifts set from the websites by allowing user to send a message card along with the gifts.
